Professional Summary

Full Stack Engineer with 7+ years of experience building web applications in React, Angular, Node.js, and .NET. Since 2024, working at Turing on LLM training, prompt engineering, and reinforcement learning workflows, evaluating and refining model outputs for coding and reasoning tasks. Comfortable across the stack, from building production APIs and interactive UIs to designing prompts and feedback loops that improve AI model behavior.

Core Skills

AI / LLM: LLM Training & Evaluation, Prompt Engineering, Reinforcement Learning (RLHF)

Frontend: JavaScript, TypeScript, React.js / Next.js, Redux, Angular, RxJs, Ngxs/Ngrx, Vue.js / Nuxt.js

Backend: Node.js (Express, Nest.js), ASP.NET (Core, MVC, Web APIs), C#, PHP (Laravel, CodeIgniter)

Databases: SQL (MySQL, SQL Server, PostgreSQL), MongoDB

APIs & Architecture: RESTful API, GraphQL, Microservices

Cloud & DevOps: AWS (EC2, S3, Lambda, Elastic Beanstalk), Azure, Git, Docker, Linux, CI/CD

Testing: Jest, Mocha, Chai, Cypress, Playwright

Methodologies: Agile, Scrum

Experience

Full Stack Engineer - Turing

Dec 2024 – Present

San Francisco, CA, US - Remote

- Train and evaluate large language models on coding and reasoning tasks, reviewing outputs against task requirements and grading criteria.
- Write and refine prompts for LLM-based features, iterating on instructions, context, and few-shot examples to improve response accuracy and consistency.
- Work within reinforcement learning workflows, providing structured human feedback on model responses that feeds into fine-tuning and model improvement cycles.
- Design test cases and edge-case scenarios to stress-test prompt behavior and identify gaps in reasoning.
- Build AI-integrated features using React, Angular, and Node.js, connecting frontend interfaces with LLM-backed backend services.
- Develop RESTful APIs and microservices to integrate LLM outputs into existing product workflows, and collaborate remotely with distributed teams using Agile methodologies.
- Participate in code reviews, prompt reviews, and CI/CD pipeline improvements to maintain quality and delivery speed.
- Analyze recurring model failure patterns across coding and reasoning tasks and document findings to guide targeted prompt and training improvements.
- Compare outputs across different models and prompt versions to benchmark response quality, consistency, and instruction adherence.
- Maintain reusable prompt templates and internal documentation on prompt engineering best practices for use across projects.
- Communicate directly with client teams to clarify task requirements and grading rubrics, ensuring model evaluations stay aligned with project goals.
- Collaborate with cross-functional teams to evaluate new LLM capabilities, recommend prompt optimization strategies, and support the adoption of AI-driven solutions across product development workflows.

- Developed and maintained a Learning Management System (LMS) using ASP.NET, C#, and MSSQL Server, covering course creation, content delivery, and student enrollment.
- Built assessment and grading modules for the LMS, including quiz creation, automated scoring, and progress tracking for students and instructors.
- Implemented role-based access control within the LMS to manage separate admin, instructor, and student permissions.
- Used front-end technologies including HTML, CSS, SCSS, Tailwind CSS, JavaScript, and TypeScript to build and enhance features across multiple client projects.
- Worked with React, Next.js, Redux, React Query, Angular, and Vue.js to build interactive, component-based user interfaces.
- Integrated headless CMS platforms such as Strapi, Keystone, and Contentful, along with WordPress REST and GraphQL APIs.
- Built REST and GraphQL-based web services to support communication between client applications and backend systems.
- Deployed and managed services on AWS (EC2, S3, Lambda) and worked with PHP/Laravel and Drupal on both Windows and Linux environments.
- Wrote unit, integration, and automated UI tests to maintain code quality and catch regressions before release.

Projects

Fundraising & Community Donation Platform

- Contributed to a fundraising platform that lets people launch campaigns around crises such as wars, floods, and earthquakes, and lets the community donate directly toward relief efforts.
- Worked on a reporting dashboard showing total funds raised and donation entries per campaign, plus a built-in Zakat calculator and daily Sadqah tracking used by donors.
- Maintained and added features to the original Angular and PHP (custom CRM) version, then worked on the platform's rebuild using React on the frontend and Node.js on the backend.
- Built out community pages where users could raise awareness about an issue and start a campaign around it, encouraging other members to contribute.
- Implemented the campaign creation and donation entry flows, along with the underlying data models used to track funds raised per campaign.

FlyNYON - Helicopter Tour Booking Platform

- Contributed to the web platform for FlyNYON, a helicopter tour and aerial photography company known for its doors-off flights, supporting the booking experience for customers.
- Built using Nuxt.js on the frontend and Nest.js on the backend, with the application deployed on Netlify.
- Worked on pages showcasing flight packages and aerial photography, helping customers pick a tour and complete a booking online.

ESI - Business Communication Platform

- Worked on a business communication platform offering both cloud and on-premises phone systems for clients.
- Built a monitoring dashboard integrated with multiple connected devices for security purposes, as part of a React frontend backed by Node.js microservices.
- Helped design the dashboard's device integration layer so new devices could be connected and monitored without changes to the core application.
